## ABSTRACT

5 A head support mechanism comprises a head and a  
slider for carrying the head, the head being caused to track  
by main driving means, wherein: the head support  
mechanism further includes driving sub-means comprising a  
thin film and causing the head to have a micro-movement;  
and the driving sub-means causes the head to have a  
10 micro-movement by utilizing flexural deformation of the  
thin film.
